

PayBack-AI: 5-Minute Demo Script

Tone: Conversational, enthusiastic, and confident | **Pacing:** Controlled & steady

1. The Hook & The Problem (0:00 - 0:45)

(Start on the Login or Home Screen)

"Hey everyone. Revenue loss is a silent killer for businesses today. It rarely happens in one clean step—a payment degrades, a checkout is abandoned, a subscription fails, or an invoice goes overdue.

Most tools today just **identify** the problem and leave the actual collection to a massive, manual ops team.

But what if your system didn't just flag these issues, but actively fixed them? I'm excited to show you **PayBack-AI**, our intelligent revenue recovery engine. It detects revenue at risk, figures out the exact right intervention, and executes a bounded recovery workflow to get the money back."

2. The Control Tower & Detection (0:45 - 2:00)

(Action: Navigate to the Control Tower / Dashboard)

"Let's jump right in. This is the **Control Tower**—the brain of our operation.

Instead of just giving you a messy list of failed payments, PayBack-AI automatically triages them. It prioritizes accounts based on recovery probability, risk level, and the value at stake.

Notice how we highlight the most critical issues here. The system isn't just telling me a payment failed; it's already analyzing **why** it failed and what to do next. It closes the loop from detection to diagnosis."

3. The Agent in Action & PolicyGuard (2:00 - 3:00)

(Action: Click into a specific Recovery Session or showcase the Agent's decision-making logs)

"Let's see what happens when the AI takes action.

Our agent doesn't use a 'one-size-fits-all' approach. It looks at the root cause. For a simple card failure, it triggers an intelligent mandate retry sequencer. But for a B2B client facing a cash flow issue, it knows to switch tactics—maybe offering a dynamic payment plan or tracking a 'promise to pay'.

And crucially, this isn't a dangerous AI black box. Everything runs through our **PolicyGuard firewall**. This ensures every escalation is compliant, respects strict stopping rules, and maintains a perfect audit trail."

4. Resolution: Payment Plans (3:00 - 4:15)

(Action: Navigate to the Payment Plans section and click on a row to show the details)

"Let's look at a live intervention. Suppose the AI detects a high-value client struggling with a large invoice.

Instead of losing the client or sending them to a generic collections agency, the agent autonomously negotiates and proposes a structured payment plan.

As a manager, I can review these proposals right here. When I click on this row, I can see the exact breakdown of installments, the rationale behind the AI's offer, and the risk assessment. If it looks good, I can approve it with one click. The AI then handles all the communication and sets up the new billing cycle."

5. The Payoff & Conclusion (4:15 - 5:00)

(Action: Return to the main dashboard, showing the overall recovered metrics)

"So, what is the ultimate result?

We aren't just identifying problems; we are proving measured money recovered across entire batches. We're providing compliant escalations, clear audit trails, and a massive reduction in manual follow-ups.

PayBack-AI turns revenue leakage from an operational nightmare into an automated, intelligent recovery pipeline.

Thank you!"
